Sintra, Portugal

I'm a software developer specialising in backend and Python programming. Currently, I work on projects involving the development of APIs and data management systems. I love technology and am always seeking to learn more. I am dedicated, proactive, and committed to the quality of my work. I am excited to explore new opportunities and challenges in my career, especially in Canada. I'm open to new opportunities and ready to contribute my knowledge and skills in a diverse and challenging work environment in Canada.

EXPERIENCES

Python Developer

Grupo Nossa Farmácia

Lisbon, Portugal • Nov 2021 - Present

As a backend developer at a pharmacy group, I have acquired skills in developing system integrations, consuming and developing APIs, and managing an e-commerce platform. I am responsible for ensuring the efficient and reliable operation of systems and APIs, providing a seamless experience for both internal users and external customers. I collaborate with other developers and stakeholders to understand requirements and implement new features, while continuously improving the performance and security of the systems. I strive to optimise our processes and enhance the customer experience, valuing the importance of efficient and reliable systems

- Experience in developing APIs for system integration
- Knowledge of frameworks such as Django for creating RESTful APIs
- Knowledge of relational databases such as SQL Server for storing and managing API data
- Familiarity with good programming practices such as TDD and clean code to ensure code quality and system scalability.
- Experience with integration in e-commerce platform VTEX.

Tools: Python3, Requests, Pymssql, SQL Server, VTEX, GIT

Frontend Developer

PortoSanti

Lisbon, Portugal • Ago 2021 - Nov 2021

As a frontend developer in an air quality analysis project, I have experience in developing improvements, creating new features, and consuming APIs. I work closely with the design team to ensure a visually appealing and intuitive user interface, and collaborate with other developers to integrate frontend and backend systems. I am responsible for consuming APIs to retrieve relevant data and presenting it in a meaningful way.

- Knowledge of HTML, CSS, and JavaScript
- Experience in creating responsive and user-friendly web applications using Angular framework
- Understanding of TypeScript and its benefits in writing scalable and maintainable code
- Familiarity with web development tools and technologies such as npm, Webpack, and Git
- Experience in integrating with RESTful APIs to fetch and display data in web applications

Tools: JavaScript, Angular, Typescript, HTML5, CSS3, GIT

SKILLS

Agile Methodologies

Test Driven Development
