SUMMARY

I'm a Software Engineer specializing in React and TypeScript. Along my journey, I have worked closely with UX designers and software engineers to create innovative and scalable solutions that provide smooth user experiences.

EXPERIENCE

Frontend Engineer
Neurotech

October 2022 - Present, Recife, Brazil

- Working on a SaaS that allows users to build predictive models easily.
- Developing and maintaining modules within a frontend monorepo architecture, enabling over 1.1k monthly experiments through the platform.
- Prioritizing accessibility and usability, resulting in an 86% adoption rate across the company.
- Maintaining a reusable component library using Ant design.
- Internationalization with React Intl.

Software Engineer
Salvus

April 2022 - October 2022, Recife, Brazil

- Development and maintenance of a SaaS that allows homecare companies to plan and monitor visits, prescriptions and care plans in real time, leading to a reduction of waste by up to 38%.
- Transform business rules into features with usability, resulting in a reduction of up to 50% in the time spent filling out information on paper.
- Collaborating with UX Designers and Software Engineers, creating features and refactoring a system that achieved 20k+ Homecare visits per quarter.
- Following and improving design patterns.
- Collaboration with the design system, mostly with Storybook

Software Engineer Intern
Salvus

September 2021 - April 2022, Recife, Brazil

- Constant knowledge exchange with tech leaders.
- Active participation in new feature development.
- Software documentation, using technologies such as Storybook and Notion.
- Understanding of the Homecare market to create better solutions.
- Focused on user experience, with the goal of impacting their lives by increase efficiency and quality of Homecare service.
