Profile

My name is Melissa, and I'm a Full-Stack developer specializing in creating high-performance and high-quality solutions for various domains and platforms. I am proficient in the programming languages Java, Kotlin, and Flutter, which I use to develop web, mobile, and desktop applications, following the best software engineering practices and the most suitable design patterns for each scenario. I have advanced English skills and always strive to improve them through continuous practice.

Signing a contract with me will be a benefit because I work in the "dev as service" model where I have AI specialists, Pentesters, backend and front end specialists in addition to full stacks on the team.
