Edmo Lima

Software Engineer | Web Engineer | Frontend
Berlin Metropolitan Area

Summary

Over a decade of robust software engineering experience,
specializing in distributed systems within high-scale environments at
renowned companies like Onefootball.com, Creditas, Nu Invest (by
Nubank) and Locaweb.

- Proficient in frontend development, particularly with TypeScript, yet
adept in diverse, polyglot environments encompassing languages
such as Go, Dart (Flutter), Python, and Ruby.

- Broad experience crafting interfaces using SPA, MVC, and other
cutting-edge architectures, ensuring personalized user experiences
with the latest stacks like React and TypeScript.

- Skilled in utilizing various frontend frameworks for web and mobile,
including Next.js, Angular, Flutter, and React Native.

- Demonstrated ability in constructing design systems and
implementing distributed frontend architectures, notably micro
frontends.

- Enthusiastic advocate of software best practices, including CI/CD,
test automation, and fostering collaborative environments through
peer and mob programming.

- Proven track record in spearheading agile transformations within
functional or multifunctional teams, championing modern agile and
extreme programming methodologies.

- Dedicated to mentoring and leading fellow engineers, fostering
growth and innovation within teams.

Experience

OneFootball
Web Engineer
February 2023 - Present (1 year 3 months)
Berlin, Germany

OneFootball is the leading digital football platform globally, boasting over 100 million active users worldwide.

As a member of the web engineering team, my primary focus revolves around enhancing the onefootball.com website.

Presently, I am actively involved in developing features aimed at fostering a more interactive and social experience for football enthusiasts, thereby enriching their engagement with their favorite teams.

Favo
2 years 8 months

Lead Software Engineer
September 2021 - December 2022 (1 year 4 months)
Brazil

With a new direction, I was entrusted with the mission to transition our web application into a fully mobile version using Flutter.

This decision was reached after extensive testing involving engineering leaders, directors, and senior developers. Collaboratively, we assessed various options and ultimately decided on Flutter as the framework to propel our mobile transformation forward.

My role encompassed building the foundational elements for the design system, crafting the application architecture, defining state management strategies, and establishing data flow patterns. Additionally, I empowered the team to prioritize streamlining alignment efforts, ensuring cohesive development practices throughout the project lifecycle.

Through meticulous planning and execution, we successfully migrated our web application to a comprehensive mobile solution, enabling Favo to capitalize on the burgeoning mobile market and enhance user engagement across diverse platforms.

We successfully migrated our web application to a comprehensive mobile solution, allowing Favo to continue its growth process

Staff Engineer
August 2020 - September 2021 (1 year 2 months)
São Paulo, Brazil

As the technical lead for Favo's consumer platform, my main focus was to ensure that the social e-commerce platform and its scope could scale and grow quickly across multiple countries, serving the maximum number of customers.

Led initiatives aimed at optimizing platform architecture and infrastructure to facilitate ongoing scalability and accommodate rapid growth.

From this moment on, it became necessary, amid rapid growth and the phase of attracting new investments, to build a design system that could serve the web.

Together with a team of 3 developers and a design team of 3, I built the first version of a design system.

Senior Frontend Developer
May 2020 - August 2020 (4 months)
Brazil

I joined FAVO during its initial phase as a startup, where my main responsibility was to lead the development of the next version of a social commerce platform, based on an MVP ecommerce framework.

Initially, I contributed to the development of an e-commerce application based on React, solving direct maintenance tasks, at the same time as I started the developer qualification process and fostering a culture of testing and continuous delivery. As the platform began to take shape, I led the transition from an MVP to a server-driven UI-based architecture.

I played a crucial role in defining the vision and design of the platform, ensuring it adhered to the key requirements of being mobile-first, a Progressive Web App (PWA) and capable of rapid expansion to multiple countries.

C6 Bank
Senior Frontend Developer
January 2020 - April 2020 (4 months)
São Paulo, São Paulo

The bank was built from the ground up using modern technologies in order to be agile, adapt quickly and offer the best possible services in the market. I worked with the platform to business, which allows customers to open an account, management and request a large variety of financial products to enterprise.

My duties consisted of developing with React, Styled Components, Apigee, Integration, Unit Test, Agile methodologies

Creditas
1 year 4 months

Team Lead
January 2019 - November 2019 (11 months)
São Paulo, Brazil

As a team leader, my role involves guiding efforts to achieve the department's main objectives, ensuring quality and facilitating on-time deliveries.

I oversee compliance with the roadmap and quickly resolve any impediments that arise, ensuring continuous progress.

Additionally, I facilitated team ceremonies and rituals necessary to maintain the delivery cadence, ensuring alignment with project timelines.

I was actively involved in creating and monitoring team productivity metrics, allowing us to track progress effectively.

Working closely with the Hiring Manager, I contributed to team building processes, including hiring, role transitions, salary decisions, promotions and exits.

Regularly report on the status of initiatives in specific forums and at various hierarchical levels, providing visibility into progress, impediments, and action plans as needed.

Additionally, I actively support the development of team skills, leading knowledge management practices collaboratively with the team.

As owner of the Creditas development cycle, I was responsible for managing evaluations, calibrations, feedback processes and development roadmaps.

Senior Frontend Developer

August 2018 - November 2019 (1 year 4 months)

São Paulo Area, Brazil

Creditas is a financial technology company, operates a digital platform which offers secured consumer loans.

Allocated to the team responsible for creating the web application and mobile application for loan management.

Nubank

Senior Frontend Developer

August 2017 - August 2018 (1 year 1 month)

São Paulo, São Paulo

I was able to assist in the creation of the broker's new investment platform. I participated in the technical definitions, implementations and assembly of team. Within a one-year process, we created a greenfield project using a stack that involved reactive architecture, docker, kubernettes, and many other technologies that supported us.

I am proud to have participated in this project mainly because I know that it is something that revolutionizes technology in the capital market.

Today the company is able to scale at least 10x its size.

Locaweb

Frontend Developer

January 2016 - August 2017 (1 year 8 months)

São Paulo e Região, Brasil

Worked in Enterprise Applications Team. In this team the main challenge is to stabilize a scalable and easy maintenance backoffice platform

OSF Global Services

Frontend Developer

May 2014 - January 2016 (1 year 9 months)

I worked on the front end of the Locaweb product team. By offshore concept.

Contributed at Predictive Social Science Project Dashboards
where the team had to Develop a worthy enterprise platform panel, worked with the team spreads in the US, and Austin, TX. Used MongoDB, massive JavaScript, JQuery, JChartFX, PHP, CodeIgniter and BootStrap, AngularJS. The project gave me a great insight and knowledge on such technologies.

Worked Developer at the Superior Tribunal de Justiça (STJ) in Brazil. Worked on migration Open Text / Vignette for the updated platform. Within the project had a hand in the site's interface, making improvements in front-end design.

Currently the project started Global Hyatt Corporation, in a Restfull, new challenge to the front-end cutting-edge technologies application

Also contributes to the Diário do Nordeste, which was front-end developer and had to give maintenance in most means of Ceará State communication, creating the new website of the group.

Instituto Dom José de Educação e Cultura (IDJ)
System Analyst
April 2013 - May 2014 (1 year 2 months)
Fortaleza e Região, Brasil

Analyze requirements, software implementation, training and support to end users of ERP procedure. Development with Open Source tools for internal and infographics software. Use of languages and frameworks like AngularJS, Node.js and Python.

Solução Sistemas
System Analyst
November 2011 - November 2012 (1 year 1 month)
Fortaleza e Região, Brasil

End-user support, training, report development with Crystal Reports and ERP Implementation tools. Analyze software requirements process of implantation and use of open source tools.
