Towards a roadmap for the migration
of legacy software systems to a
microservice based architecture

An Experience Report from the
Migration of Legacy Software
Systems to Microservice Based
Architecture

Hugo Henrique

Software Developer
Salvador, Bahia, Brazil

Summary

Leveraging a robust foundation in full-stack development, my role at
DOT Digital Group emphasizes crafting innovative software solutions
with a proficiency in PHP.

My commitment at SimplesVet extended beyond mere coding; it
involved architecting resilient software that drives business success.
With a Master of Science in Computation, I employ Domain-Driven
Design and Hexagonal Architecture to ensure that our team's
deliverables are not only functional but also strategically aligned with
our overarching business objectives.
