I'm a Software Architect with several years of experience. I have deep knowledge of many JavaScript based technologies and the major Microsoft server-side technologies.

My main goals are build applications that allow users to work better, without rushing or stressing, making them less reactive, more proactive, focusing on the things that machines cannot do like human-human interactions. And also change the view that applications always crash and never meet 100% of the workflow needs by delivering users powerful, stable and reliable systems.

EXPERIENCE

2020 - 2023 Software Architect
ClearSale - Remote

I was hired to work in the company's international division, I developed a portal for clients to manage and monitor their operations, I also worked on decoupling/atomizing parts of the system, making them agnostic and efficiently scalable. Later, there was a merge between Brazilian and international divisions and I was promoted to business unit architect, leading not only several teams, but also with the tasks of thinking about macro-topology and enterprise architecture.

2013 - 2020   Web Development Specialist
IT Lab Brasil - São Paulo / SP - Hybrid

I worked on several projects, from fintechs to a customized chatbot framework, but mainly for the country's largest bank's broker. There I designed a new development stack to support all internal applications, led massive refactorings of legacy applications and also developed a distributed stock market fund allocator.

2011 - 2013   Senior Consultant
Ímpar - São Paulo / SP

I worked as a Senior Sharepoint Consultant, visiting clients and helping them configure, customize and maintain their servers. Even though I didn't really like the platform, it was a great opportunity to be closer to projects sponsors and develop some soft skills.

2008 - 2011   Middle Software Developer
IT Lab Brasil - São Paulo / SP

I worked mainly as an outsourced software developer for the consultancy firm clients. During this period I developed e-commerce platforms, warehouse management systems, a sales policy manager, an application to negotiate credit card rates for a big issuer and some smaller projects.

2006 - 2008 Internship / Junior Developer
Speedy Officer do Brasil - Santos / SP

I worked with Delphi and COM+ technologies writing software for the insurance industry. I had the opportunity to develop a completely new Web GUI during the Web 2.0/Ajax revolution that made me explore vanilla JavaScript as much as possible.

SKILLS

.Net Development
C# - WebAPIs - Entity Framework - Asp.NET - WCF

NodeJS Development
Restify - Sequelize - Jest - Mocha

Front-End Development
Angular - VueJs - Javascript - TypeScript - Html - CSS

Databases
SQL Server - PostgreSQL - MySQL - MongoDB

Clouds / Devops / SCMs / Others
Azure - AWS - Azure Devops - Jenkins - Git - TFS - Docker

Soft Skills
Team Leading - Mentoring
